

DHEERAJ PULIJALA

Certified Data Engineer and PowerBI Associate

Albuquerque,NM | +1 (505) 433-7729 | dheerajpulijala@gmail.com

PROFESSIONAL SUMMARY

Experienced Data Analyst and BI professional with 6+ years of delivering impactful, end-to-end data solutions across healthcare, supply chain, and other industries. Skilled in building robust ETL pipelines using Azure Data Factory, SSIS, Airflow, and Spark, with deep expertise in SQL optimization across Snowflake, SQL Server, PostgreSQL, and MySQL. Proven track record in creating interactive Power BI and Tableau dashboards, driving executive decision-making, and developing predictive models using Python (Pandas, Scikit-learn, TensorFlow). Proficient in big data tools (Kafka, Hadoop), cloud integration (Azure, AWS, GCP), API integration, CI/CD, and containerization with Docker and Kubernetes. Adept at ensuring data integrity, collaborating cross-functionally in Agile teams, and translating complex data into actionable insights—making me a strategic asset to any data-driven organization.

TECHNICAL SKILLS

Programming Languages: Python, Scala, R, SQL, PL-SQL,T-SQL

Cloud Platforms: Azure (Data Factory, Data Lake, Databricks), GCP (BigQuery, Dataflow), AWS (Redshift, S3, Glue)

Databases: Snowflake, PostgreSQL, MySQL, MongoDB, Oracle

Scripting Languages: JavaScript, NodeJS, PHP, jQuery, CSS, HTML.

Data Visualisation/Analysis tools: Power BI, Tableau, SAS,Matlab,Looker

Big Data Technologies:Apache Spark, Apache Kafka, Hadoop, Hive, PySpark, HDFS.

Machine Learning: Scikit-learn, TensorFlow (basic proficiency)

ETL Tools: Azure Data Factory, SSIS, Apache Airflow

PROFESSIONAL EXPERIENCE

Data Analyst, State of New Mexico, Albuquerque,NM

Aug 2023 - Present

- Developed **Power BI dashboards** for monitoring **claims processing, injury trends, and settlement timelines** for the workers' compensation division, improving decision-making with data-driven insights.
- Created and maintained **ETL pipelines** using **Azure Data Factory**, transforming and integrating **structured and semi-structured data** from sources such as insurance, legal, and hospital records.
- Built and deployed **data marts** in **Azure SQL Database** for injury classification, **financial payout tracking, and legal compliance analytics**, optimizing query performance with **indexing strategies**.
- Designed data models and standardized metrics across the organization, collaborating with **data stewards and business teams** to ensure consistent data governance practices.
- Wrote advanced **SQL queries** for aggregating and cleansing historical claims data, implementing **stored procedures** for complex transformations.
- Integrated **Google Analytics** into internal dashboards, tracking web traffic and performance metrics across various agency portals.
- Developed **Python scripts** for automated **data validation** and **anomaly detection** in claims data, identifying outliers and ensuring data quality.
- Enhanced **Power BI interactivity** using **DAX** for dynamic filtering and **drill-through** capabilities tailored to different stakeholder needs.
- Implemented **scheduled refresh policies** and **alerting mechanisms** in Power BI to track ETL pipeline failures and ensure real-time data availability.
- Produced **technical documentation** for ETL workflows, data models, and Power BI consumer guides, ensuring consistent project delivery.
- Conducted **User Acceptance Testing (UAT)** with department users, iterating on dashboard designs and refining metrics based on feedback.
- Assisted **IT teams** in configuring **Azure security policies** and **identity management** to ensure secure access to reporting endpoints.
- Participated in **monthly performance reviews**, presenting dynamic insights to leadership teams using **data storytelling** techniques in Power BI.
- Mentored junior analysts, providing training on **Power BI best practices** and **SQL query optimization** techniques.

- Designed and implemented **Power BI** dashboards for **procurement analytics** and **supply chain management**, enabling real-time tracking of inventory anomalies and purchase order fill rates.
- Developed **ETL pipelines** to process EDI documents (850, 855, 810, etc.) and integrated data into **AWS S3** for downstream reporting using **SQL Server**.
- Collaborated with SAP developers to troubleshoot and resolve **IDoc issues**, improving the accuracy of supplier performance tracking and invoice reconciliation.
- Created **Python** routines to merge vendor scorecards with **supply chain KPIs**, enhancing the **data quality** and supplier relationship management.
- Documented **ETL workflows** in **Azure Wiki**, ensuring transparency and creating knowledge-sharing resources for the team.
- Enabled drill-down capabilities in **Power BI**, providing users with in-depth **analysis of supplier performance metrics**, delivery delays, and operational inefficiencies.
- Monitored **Power BI** dataset usage and configured gateway settings for secure, high-performance report access.
- Performed root-cause analysis of discrepancies between **SAP** data and **analytical dashboards**, identifying gaps and **optimizing data flows**.
- Presented biweekly insights to **supply chain managers**, recommending actionable data-driven improvements to **procurement strategies**.
- Applied **deduplication logic** and implemented **data consistency rules**, ensuring accurate reporting of supplier records across the organization.
- Developed custom **SQL functions** for handling missing data and ensuring completeness in inventory reporting.
- Automated data refresh schedules and implemented alerting systems for any **ETL** failures or performance degradation.
- Collaborated with stakeholders to **define KPIs** and establish a **data governance framework** for future reporting needs.
- Supported business analysts in creating **ad-hoc reports** and conducting **variance analysis** for supply chain optimization.
- **Azure Wiki**, creating a centralized knowledge repository that improved team collaboration and onboarding efficiency.

- Led the end-to-end development of **healthcare analytics pipelines** using **Apache Spark** and **PySpark**, processing over 50 GB of multi-source vendor data daily.
- Developed dynamic **ETL jobs** to clean and transform **CSV, JSON, and XML data**, **optimizing data flows** for **real-time analytics**.
- Built **SparkML** models for **predictive analytics** on prescription drop-off rates, enhancing forecasting accuracy and **operational efficiency**.
- Developed interactive **Power BI dashboards** to visualize **healthcare KPIs**, such as patient outcomes and compliance metrics, across different dimensions.
- Designed **data marts** using **Azure SQL Database**, ensuring high availability and performance for clinical and **financial reporting**.
- Integrated **HIPAA-compliant data processing** workflows into the pipeline, ensuring security and privacy for sensitive patient information.
- Enhanced pipeline performance by 70% through optimization of **Spark execution plans** and **data caching techniques**.
- Deployed **ETL workflows** using **Azure Data Factory**, monitoring job performance via **Azure Monitor** and custom logging systems.
- Led the implementation of **Airflow DAGs** for automated job execution and **dependency management**, incorporating **recovery checkpoints** and **SLA breach alerts**.
- Delivered **comprehensive technical documentation**, including **ETL diagrams**, **deployment SOPs**, and **version control logs**, for reproducibility and auditing purposes.
- Collaborated closely with **data architects** to build scalable, high-performance **data systems** that supported **rapid analytics**.
- Presented findings in **strategic business reviews**, identifying operational **bottlenecks** and recommending actionable insights for improvement.
- **Automated deployment** pipelines using **Azure DevOps**, ensuring continuous integration and continuous deployment (**CI/CD**) for the **data pipelines**.
- Optimized large-scale data transformations by utilizing **NumPy** for high-performance numerical operations and enhancing the efficiency of **data processing workflows**.

- Developed and optimized **SSRS (SQL Server Reporting Services)** reports and dashboards for Cisco's supply chain operations, enabling enhanced decision-making with detailed views on inventory management and procurement planning.
- Integrated data from multiple sources, including **ERP systems (SAP), CRM (Salesforce), and databases (SQL Server)**, ensuring seamless **data flow and real-time reporting**.
- Built and maintained **SSIS ETL packages** to automate **data extraction, transformation, and loading** processes, improving data pipeline efficiency by 25%.
- Worked with business analysts to **define KPIs**, developed dimension models, and created interactive visualizations in **Power BI** for **stakeholders** in procurement and **supply chain teams**.
- Enhanced **SQL queries** by creating **views, stored procedures, and functions** for optimized performance, ensuring quicker response times in complex reports.
- Designed and implemented **data governance policies**, ensuring compliance with corporate standards for **data access and quality**.
- Conducted regular **data validation** and **data profiling** to ensure accuracy and integrity of **BI solutions**.
- Implemented **Power BI security roles** and **row-level security** to ensure that reports adhered to corporate access policies.
- Collaborated with **data architects** to create and maintain **dimensional models** and **data marts** for efficient querying.
- Automated reporting using **Power Automate**, reducing manual report generation time by 40% and ensuring accurate distribution.
- Conducted regular **UAT** to ensure that end-users were satisfied with **BI solution functionality** and performance.
- Developed and maintained **real-time dashboards** that provided stakeholders with live updates on **sales forecasting, inventory turnover, and supply chain risks**.
- Participated in **Agile sprints**, collaborating closely with cross-functional teams to deliver solutions within deadlines.
- Worked on **data warehouse optimization**, improving performance by **fine-tuning ETL processes** and redesigning query execution plans.
- Managed data storing and processing using big data tools such as **Hadoop , HDFS , Hive and Spark .**

CERTIFICATIONS

- Microsoft certified: Power BI Data Analyst
- Google certified: Professional Data Engineer
- Microsoft Certified Data Engineer

EDUCATION

- BTech in Electronics and communication engineering - B V Raju Institute of Technology - CGPA-8.6/10
