

DHEERAJ PULIJALA

Information Systems Application Specialist | .NET Application Developer | State Government IT

Open to Relocation | Oklahoma City, OK

+1 (970) 581-9368

pulijalaunni@gmail.com

PROFESSIONAL SUMMARY

Information Systems Application Specialist with a proven record of planning, designing, developing, testing, and maintaining .NET application systems for state government agencies and regulated enterprise environments. Currently serving as the primary application developer for the State of New Mexico Workers' Compensation Administration, independently owning the full lifecycle of five production .NET web systems including requirements analysis, program code design, screen layouts, database models, testing, and ongoing maintenance. Experienced analyzing organizational business needs, conferring with users to evaluate requirements and develop plans of approach, writing and debugging .NET program code, designing SQL Server database models, conducting user acceptance and regression testing, and providing technical assistance and training to internal staff and stakeholders. Brings deep familiarity with state government IT operations, compliance requirements, and the user support demands of law enforcement and regulatory agency environments. Committed to the OSBI values of Trust, Integrity, and Respect, and to building reliable, secure application systems that support the mission of public safety and justice. Holds three active Microsoft certifications and an MS in Computer Information Systems with a 3.8 GPA.

PROFESSIONAL EXPERIENCE

Information Systems Application Developer III | State of New Mexico, Workers' Compensation Administration | Albuquerque, NM

July 2024 to Present

- **Independently plan, design, develop, and maintain five production .NET application systems** supporting the business needs of a state regulatory agency, including a public-facing ASP.NET Core MVC web application, an internal SharePoint Online intranet, a Drupal CMS platform, and integrated reporting systems, taking full responsibility for all phases of the software development lifecycle from requirements analysis through implementation and ongoing maintenance.
- **Analyze and design .NET program code, screen layouts, database models, and reports** to support the development of new and enhanced agency applications, reviewing user requests and business requirements to define functional specifications, designing appropriate technical solutions, and producing development documentation that guides implementation and supports future maintenance.
- **Write, test, debug, and document .NET application code** across all agency systems, building ASP.NET Core MVC controllers, Razor views, C# business logic layers, REST API endpoints, and SQL Server data access components, applying structured testing protocols including unit testing, integration testing, and regression testing before each production release.
- **Confer with users and agency management to evaluate requirements, discuss solutions, and develop plans of approach**, translating non-technical business needs from claims adjusters, legal staff, compliance officers, and agency leadership into detailed functional requirements, technical designs, and implementation specifications.
- **Conduct and coordinate user acceptance testing and regression testing** for all quarterly system releases, writing test scripts covering functional, security, and performance scenarios, facilitating structured sign-off sessions with business stakeholders, and tracking and resolving defects in Azure DevOps Boards before approving production deployment.
- **Perform ongoing maintenance and review of application systems**, identifying performance problems and developing appropriate solutions including SQL Server stored procedure refactoring that reduced processing time by 40%, index optimization based on execution plan analysis, and code refactoring that improved application stability and response time.
- **Provide technical assistance and training to internal staff** on agency-developed .NET applications and web platforms, responding to help desk escalations, troubleshooting minor network and application issues, and conducting structured walkthroughs to train users on new system features and workflow changes.
- **Design and implement application security measures** including Azure Active Directory role-based access control, JWT bearer token authentication, parameterized SQL queries, input validation middleware, SSL certificate lifecycle management, and OWASP-aligned system hardening, ensuring all agency applications comply with state IT security standards and data privacy requirements.
- **Design, build, and administer an XML-based data exchange integration** using C# and XSLT transformations to ingest and normalize structured claim data feeds from third-party insurance carriers, implementing schema

validation, error quarantine, and structured logging that enforces data integrity at the integration boundary between external partners and internal systems.

- **Develop and maintain SQL Server database components** supporting all agency applications, including stored procedures, views, indexes, and data models, writing optimized T-SQL that balances performance, security, and maintainability across databases supporting claims adjudication, financial reporting, and legal case management workflows.
- **Develop reporting and data visualization solutions** using SQL Server, SSRS, and Power BI, building real-time dashboards and paginated reports for agency analysts and executive leadership, replacing manual Excel-based reporting processes and providing on-demand access to operational data.
- **Participate in structured walk-throughs and planning activities**, presenting system designs and development progress to IT leadership and agency stakeholders, documenting technical specifications and change records, and contributing to long-range technology planning discussions for agency information systems.

Information Systems Application Developer II | Colorado State University | Fort Collins, CO Aug 2022 to Dec 2023

- **Planned and developed a complete .NET application system** from initial requirements through production deployment, designing and implementing an ASP.NET Core 6 Web API backend with Angular frontend that provided university academic and financial aid staff real-time access to student enrollment analytics across 30,000 records.
- **Analyzed and designed SQL Server database models, screen layouts, and reports** to support the student analytics application, normalizing data from four source systems into a unified relational schema and writing over 40 stored procedures and views that powered both the application API layer and the Power BI reporting layer.
- **Reviewed and analyzed user requests** from six university departments including Admissions, the Registrar, and Financial Aid, conferring with department heads and end users to validate and clarify needs, developing functional requirements documentation, and designing application solutions aligned to each department's operational workflows.
- **Performed all aspects of .NET systems design** including writing ASP.NET Core program code, configuring Azure Active Directory B2C for FERPA-compliant role-based authentication, building Entity Framework Core data access layers, and implementing REST API endpoints with JWT authentication that enforced data access boundaries for six distinct user roles.
- **Conducted user acceptance tests, regression tests, and integration tests**, writing 60 test scenarios covering authentication flows, role-based data access, reporting accuracy, and responsive interface behavior, facilitating structured UAT sessions with six university departments, and achieving zero critical defects at production go-live.
- **Identified and resolved a critical data exposure defect** during testing where a missing SQL query predicate was returning records outside a user's authorized scope, escalating the risk to IT leadership, deploying a corrected parameterized procedure, and adding a regression test to the CI pipeline to prevent recurrence.
- **Built SQL Server data processing pipelines** using SSIS, extracting student records from Oracle PeopleSoft and loading into the application database nightly with transformation rule validation and referential integrity checks, reducing average query execution time by 35% compared to direct source-system queries.
- **Prepared development documentation** covering API contracts with Swagger annotations, SQL Server schema data dictionaries, ETL process runbooks, and end-user training guides, enabling the university IT team to take full operational ownership of the application system after project handover with zero transition incidents.
- **Provided technical assistance and training** to university department staff on the new application system, developing user guides, conducting structured training sessions, and responding to post-launch support requests to ensure smooth adoption across all six departments.
- **Implemented Azure DevOps CI/CD pipelines** with automated NUnit test gates and zero-downtime deployment slot swaps, enabling reliable and consistent delivery of application changes across development, staging, and production environments with automated rollback on failed health checks.

Application Developer | JBS USA | Greeley, CO

May 2023 to July 2023

- **Designed and developed a full .NET web application** for vendor and supplier management using ASP.NET MVC (C#), AngularJS, and SQL Server, writing program code, designing screen layouts and interface elements, building the database model, and implementing testing criteria for a system serving JBS's North American procurement operations.
- **Wrote, tested, debugged, and documented T-SQL stored procedures and C# application code** for automated transaction processing across six EDI transaction types, implementing parse, validate, and route logic that eliminated daily manual data entry and reduced transaction processing errors to near zero.
- **Designed and built a C# Windows Service** that performs automated file ingestion, schema validation, and SQL Server record insertion with structured error logging and quarantine routing for invalid records, replacing a manual file processing workflow.

- **Provided technical assistance to internal IT and business teams**, troubleshooting EDI integration failures, SQL Server data issues, and application defects as they arose, maintaining continuous system operation during a high-volume quarter.
- **Supported a SQL Server database migration**, writing row-count reconciliation and referential integrity validation scripts that confirmed zero data loss and zero constraint violations across 30 tables before production cutover.
- **Produced technical documentation** covering all application components including EDI transaction mappings, stored procedure logic, file processing architecture, and operational procedures, enabling the client team to maintain the system independently after engagement close.

Application Developer, Senior | Accenture | Hyderabad, India

June 2021 to July 2022

- **Performed all aspects of .NET systems design and development** including leading SSIS ETL pipeline development that migrated over 15 million records from a legacy Oracle system into Azure SQL, designing transformation rules, writing program code, testing data integrity, and managing a zero-data-loss production cutover with full audit trail documentation.
- **Analyzed and redesigned existing application systems** through gap analysis and performance reviews, identifying that 15 critical T-SQL queries were performing full table scans without appropriate indexes, developing and implementing an optimization plan that improved database performance by 40%.
- **Migrated three .NET application systems from ASP.NET Framework to ASP.NET Core**, re-architecting dependency injection, converting synchronous database calls to async/await Entity Framework Core, and deploying to Azure App Service with zero-downtime releases, reducing infrastructure maintenance costs by 30%.
- **Designed REST API specifications and implemented secure Web API endpoints** with global exception middleware, structured error responses, and JWT token validation, standardizing integration patterns across 12 downstream consumer systems and eliminating four recurring integration escalation incidents per month.
- **Automated nightly data processing workflows** using PowerShell scripts and SQL Agent jobs, replacing a three-hour manual analyst runbook and reducing manual processing workload by 40% while implementing structured exception alerting for the operations team.
- **Provided guidance and mentorship to junior developers**, conducting structured code reviews that identified async/await issues, SQL injection risks, and null reference defects before they reached production, and establishing team standards for secure, maintainable .NET development practices.
- **Authored technical documentation** covering ETL architecture, API contracts, database schemas, and troubleshooting procedures, reducing new team member onboarding time from two weeks to four days.

Application Developer | Accenture | Hyderabad, India

May 2019 to June 2021

- **Designed and developed responsive multi-tiered web applications** using ASP.NET MVC, ReactJS, HTML5, CSS3, and JavaScript, building screen layouts, dynamic interface elements, and backend API services for an internal performance tracking system used by 500 plus staff.
- **Wrote, tested, and debugged ASP.NET Web API program code** with Entity Framework Core data access, JWT authentication, and model binding validation, maintaining consistent API contracts and security controls across three front-end development teams consuming the shared backend.
- **Diagnosed and resolved a production application defect** where a memory leak in a Node.js middleware service was causing a recurring 10 to 15 percent CPU overhead spike every 48 hours, using Azure Application Insights profiler traces to isolate the root cause and implement a permanent fix.
- **Participated in structured walk-throughs and code reviews** for three junior developers, identifying security and performance defects before they reached production and providing training on .NET development best practices, security coding standards, and testing protocols.
- **Assisted in planning and implementation activities**, attending sprint planning sessions with business analysts and product owners, providing development estimates, defining acceptance criteria for user stories, and contributing to technical feasibility assessments that shaped release scope.
- **Built a reusable component library** in React and TypeScript that standardized shared interface patterns across three parallel feature teams, reducing per-feature UI development time and ensuring consistent behavior and styling across the application.

TECHNICAL SKILLS

.NET Development	ASP.NET Core (MVC, Web API, Razor Pages), ASP.NET Framework, C#, Entity Framework Core, LINQ, Async/Await, Dependency Injection, JWT Auth, Windows Services
Database Design	SQL Server (T-SQL, stored procedures, query optimization, indexing, execution plan analysis, database modeling), Azure SQL, Oracle, PostgreSQL, MySQL

Web Technologies	HTML5, CSS3, JavaScript, TypeScript, React, Angular, AngularJS, jQuery, XML/XSLT, REST and SOAP web services
Testing	Unit testing, integration testing, user acceptance testing, regression testing, NUnit, Selenium WebDriver, Azure DevOps test plans
Cloud and DevOps	Azure (App Services, SQL, DevOps CI/CD, Application Insights, AD, Blob Storage), AWS (S3, RDS, EC2, CloudWatch), Git, Docker
Data and Reporting	SSIS, SSRS, Power BI (Microsoft Certified), Azure Data Factory, Azure Analysis Services, DAX
Security	OWASP Top 10, RBAC (Azure AD), JWT bearer auth, parameterized queries, input validation, SSL lifecycle, data privacy compliance
SDLC	Agile/Scrum, structured walk-throughs, requirements analysis, technical documentation, Azure DevOps Boards, Jira, mentorship

CERTIFICATIONS

Microsoft Certified: Power BI Data Analyst Associate | Microsoft Certified: Azure Data Engineering Associate
Microsoft Certified Application Developer (MCAD) | Colorado State University, Certified IT Project Management

EDUCATION

Master of Science, Computer Information Systems *GPA: 3.8 / 4.0*

Colorado State University | Advanced IT Project Management, Visual Application Development, Business Data Visualization

B.Tech, Electronics and Communication Engineering *GPA: 8.6 / 10.0*

B V Raju Institute of Technology | Computer Networks, Operating Systems, Object-Oriented Programming, Data Structures and Algorithms
